

Accessing your ingested data

A QUICK START GUIDE

1. Your data is accessible from the dashboard as a:
 - data layer (ingested source input data)
 - data view (two or more data layers combined into a single view)
 - gallery of snapshots (saved data exploration tool filters)

2. Use the data exploration tool to view your ingested data on a map

3. Create a multi-dimensional filter (geographical area, time range and data layer properties) to explore patterns in your data

4. Create new data views of your own by combining data layers together, overlaying the points from data layer on another

The GeoSpock Spatial Big Data Platform, sometimes referred to as the Platform, is a cloud-based solution that processes big data and makes it available for analysis, enabling you to find patterns and trends in your data.
