

# Creating a layer template

A QUICK START GUIDE

---

1. Put your source input data into an S3 bucket and get the schema for your data

2. From the Datasets tab, click the Create layer template button

3. Configure the layer template fields, setting the data type for each field

4. Check the sample visualization to make sure your data is being interpreted correctly

5. Now you are ready to ingest your data

The GeoSpock Spatial Big Data Platform, sometimes referred to as the Platform, is a cloud-based solution that processes big data and makes it available for analysis, enabling you to find patterns and trends in your data.
